BULBS
HYACINTHS
Single and dozen prices postpaid, larger quantities at buyer's expense.

Bulbs in the open ground should be set out from the middle of October to December. Remove four inches of surface soil and arrange the bulbs on the freshly exposed surface, placing them six inches apart, then replace the soil. Protect from frost by covering beds with four inches of leaves kept in place by the weight of light sticks or branches, but do not cover until the ground has become well frozen. Remove this covering in early spring.

For indoor culture place one bulb in a four inch pot, or several in a larger pot, using any good soil, first placing drainage in the bottom of the pot. Plant the bulbs even with the surface, water thoroughly, and place in a cool dark place for six or eight weeks, taking care not to let the soil dry out, then gradually bring them into full light and water freely. Keep in a cool room.

They can be set outdoors, the pots being buried several inches below the surface and brought into the house as needed.
